# MOLUNG EDUCATIONAL FRONTIER

Year 5

October 2016

## Editorial

As the world of knowledge and scholarship is becoming wider and the human world is becoming smaller through globalization, we need to be engaged in research into the vast unknown domains. In accordance with the changed paradigm of epistemology, *Molung Educational Frontier* has also crossed traditional boundaries of disciplines and is trying to establish new boundaries. The October issue of this journal too incorporates the principles of cross-disciplinarity to a considerable extent. As such we have incorporated articles and research papers from different researchers working in various fields of knowledge and scholarship. While some articles are about natural science such as physics, others are about history, politics, and society, and still others are about art and literature. However, the issues addressed by different authors are neither exclusive nor exhaustive. Many issues are in fact overlapping.

Despite its publication as an educational magazine in its inception *Molung Educational Frontier* has now turned into a periodical academic/scholarly journal for technical and financial reason. Likewise, it is going to be published once a year instead of four times a year for the same reason. Like another academic publication of Molung Foundation, this is also an interdisciplinary publication that includes research articles from different fields ranging from natural science to social science to arts.

The Editorial Board is indebted to Molung Foundation for the publication of this issue of the journal. We are also equally grateful to the researchers and writers who have contributed to the journal both academically and logistically. We should also thank all those who have contributed economically for this publication. We heartily welcome further endeavors of researchers in the future as well.

The Editorial Board apologizes for not being able to publish all the articles sent by researchers that they meant to be published. We hope to publish them in its next issue that is going to be published in January 2017. We also expect from the interested researchers to send their articles that are based on genuine research and written on the given format within the fixed period for their review and editing.
